

# Yuyeong Kwak

Software Developer · Frontend / Full-stack · AI-enabled Web Development

Email: yududdl12@naver.com | Portfolio: <https://portfolio-vue-tan.vercel.app> | Seoul, South Korea

## PROFILE

Practical software developer with 3+ years of hands-on web service experience, working across frontend, backend integration, admin systems, and production operations. Experienced with React, Remix, Vue, JavaScript/TypeScript, PHP, MySQL, REST APIs, and SSR. I focus on turning business requirements into reliable user-facing products, improving operational workflows, and solving real production issues rather than implementing features in isolation. I have also integrated the ChatGPT API into a production bulletin-board workflow for automatic translation, and use Cursor and GPT as development productivity tools with human validation and code review.

## TECHNICAL SKILLS

|                 |                                                                                     |
|-----------------|-------------------------------------------------------------------------------------|
| Frontend        | React, Remix, Vue 3, JavaScript (ES6+), TypeScript, HTML5/CSS3/SCSS, Zustand, Pinia |
| Backend         | PHP, Java, Spring Boot, RESTful APIs, JSP, Thymeleaf                                |
| Database / Data | MySQL, SQL, Redis                                                                   |
| Cloud / DevOps  | AWS, Linux, Docker, Git/GitHub, GitLab, CI/CD fundamentals                          |
| AI / Tools      | ChatGPT API, Cursor, GPT, pnpm Monorepo, Notion, Figma, Bruno                       |

## WORK EXPERIENCE

### WaveCode Co., Ltd.

Dec 2025 - Present

Software Developer | Seoul, South Korea

- Maintain and develop dermatology charting and web administration systems across production services.
- Improved SSR rendering stability in a Remix environment by investigating hydration and client/server rendering inconsistencies.
- Designed shared state flows with Zustand for cart, reservation, and modal features, centralizing reusable logic.
- Resolved multilingual session inconsistencies by improving cookie/Redis synchronization and API data consistency.
- Integrated the ChatGPT API into a bulletin-board workflow to automate post translation and reduce repetitive manual work.
- Work in a pnpm monorepo using shared UI packages (@repo/ui) to improve component reuse and maintainability.

### DoubleDown Games

Jun 2025 - Sep 2025

Software Developer | Malaysia

- Led frontend development for an admin modernization project supporting a large-scale iGaming platform.
- Built operational dashboards and high-volume data grids with Tabulator for real-time analytics and statistics.
- Implemented JSON-based internationalization and REST API integrations with a focus on maintainable admin UX.

### Chabot Insurance

May 2024 - Jun 2025

Software Developer | Seoul, South Korea

- Developed and maintained PHP/MVC-based CRM and ERP services using PHP and MySQL.
- Designed database schemas, integrated REST APIs, and optimized data queries for reliability and performance.
- Managed Linux/Crontab workflows and AWS-based service environments; handled authentication and session logic.
- Processed large event datasets while improving code clarity, data handling, and operational efficiency.

### EduCompany

Previous Experience

Software Developer | Seoul, South Korea

- Led the end-to-end delivery of a company website from planning and UX/UI implementation through frontend development.
- Implemented responsive web standards and SEO improvements with a focus on usability and search visibility.

## SELECTED VALUE

What I bring: I combine frontend product development with backend/API understanding, which helps me diagnose issues across the full request-to-data flow. I am particularly effective in admin/operational products where

usability, data accuracy, internationalization, and workflow efficiency matter. My recent AI API integration experience also gives me a practical foundation for applying LLMs to repetitive business processes.
